

# **AOOP Assignment Submission Report**

[Submitted as part of CTA Assignment No-1]

Course:	Advanced Object-Oriented Programming	Course Code:	18UCSE508
Semester:	V	Division:	A

Submitted by:

USN:	2SD20CS070	Name:	Pooja Basavaraj Dambal
------	------------	-------	------------------------

## 1. Problem Definition:

1. Write a Java program to build the GUI application using JavaFX for the following requirements:
  - a) Read user name and password using appropriate JavaFX controls.
  - b) Validate the input. If user name and password are matched with the assumed values, then display the welcome scene with proper text.
  - c) If user name and password don't match, then raise appropriate exception.

## 2. Java Program:

```
package application;
import javafx.application.Application;
import javafx.geometry.Pos;
import javafx.scene.Scene;
import javafx.scene.control.Button;
import javafx.scene.control.Label;
import javafx.scene.control.PasswordField;
import javafx.scene.control.TextField;
import javafx.scene.layout.FlowPane;
import javafx.scene.layout.HBox;
import javafx.scene.layout.VBox;
import javafx.stage.Stage;
public class Question1 extends Application {
    public static void main(String[] args) {
        launch(args);
    }
    @Override
    public void start(Stage myStage) {
        // TODO Auto-generated method stub
        myStage.setTitle("UserName and PassWord");
        VBox vbox = new VBox();
        HBox hbox = new HBox();

        Label label = new Label("User Name : ");
        TextField tf = new TextField();

        // layout for component
        HBox hbox2 = new HBox();

        Label label2 = new Label(" password : ");
        PasswordField pass = new PasswordField();
```

```
// to keep components center
hbox.setAlignment(Pos.CENTER);
hbox2.setAlignment(Pos.CENTER);

//adding components to the horizontal layout
hbox.getChildren().addAll(label,tf);
hbox2.getChildren().addAll(label2,pass);

// creating the button
Button btn = new Button("Submit");

// label for show results
Label label1 = new Label("");

// assumed value for validation
String username = "20cs070";
String password = "poojabd";
// setting action on button
btn.setOnAction(e -> {
// getting the values from the field
String EUsername = tf.getText();
String Epassword = pass.getText();

// if entered username and password are equal then create a new welcome
//Scene
if(username.equals(EUsername) && password.equals(Epassword)) {
    label1.setText(" : WELCOME : ");
    FlowPane flowpane = new FlowPane();
    flowpane.setAlignment(Pos.CENTER);
    Label welcome = new Label(": Welcome :");
    flowpane.getChildren().add(welcome);
    Scene myScene1 = new Scene(flowpane,500,300);
    myStage.setScene(myScene1);
} else {
    try {
        throw new MyExceptionn();
    } catch (MyExceptionn e1){
        label1.setText(e1.toString());
    }
}
});

// adding horizontal components to the main vertical layout
vbox.getChildren().addAll(hbox,hbox2,btn,label1);

// adding layout to the scene
```

---

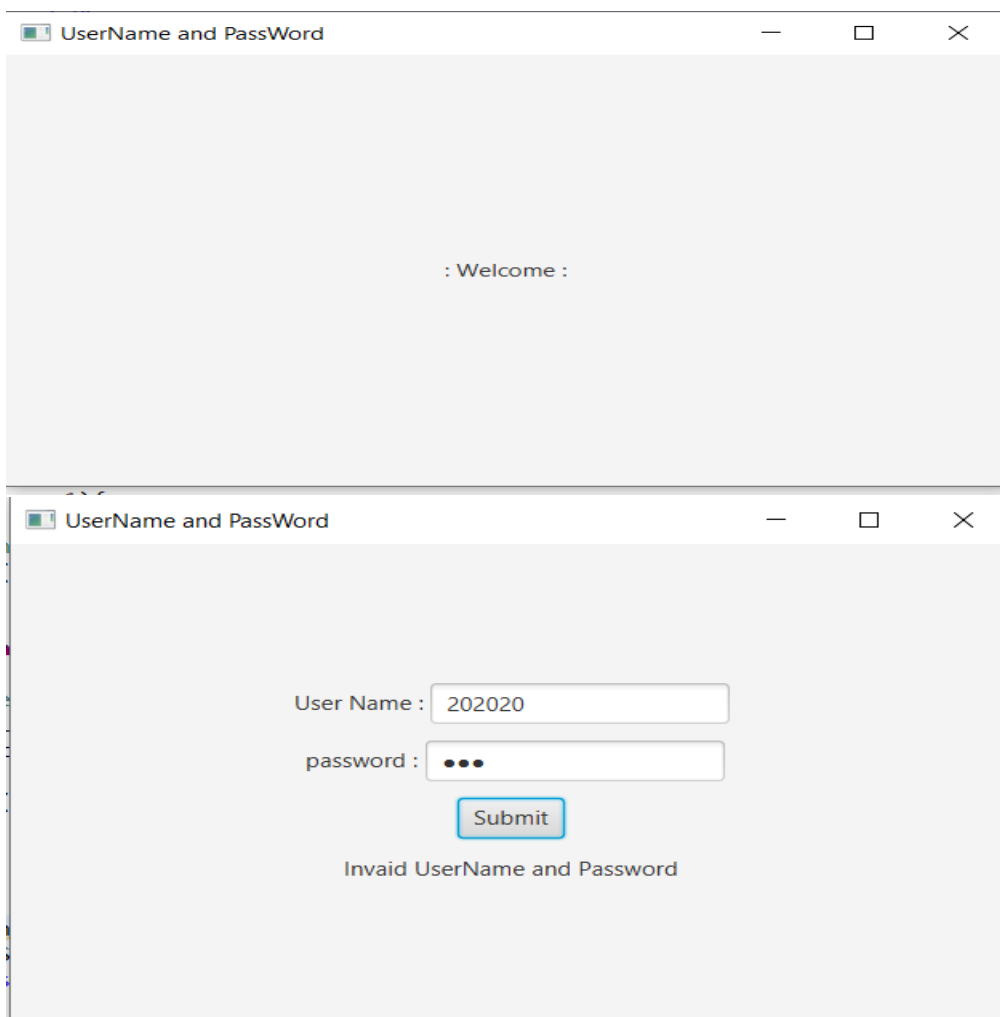

```
Scene myScene = new Scene(vbox,500,300);

// sapcing between the vartical components
vbox.setSpacing(10);
vbox.setAlignment(Pos.CENTER);

myStage.setScene(myScene);

myStage.show();
}
}
class MyExceptionn extends Exception{
public String toString() {
return "InvaId UserName and Password";
```

### 3. Screen Shots of Execution:

## 1. Problem Definition:

Q2. Write a Java program to build the GUI application using JavaFX for the following requirements: a) Create a Menu control to display the menu items: File, Edit & Help. b) Create sub menus in the order: File → New, Open & Save. Edit → Cut, Copy & Paste. Help → Help Centre, About Us

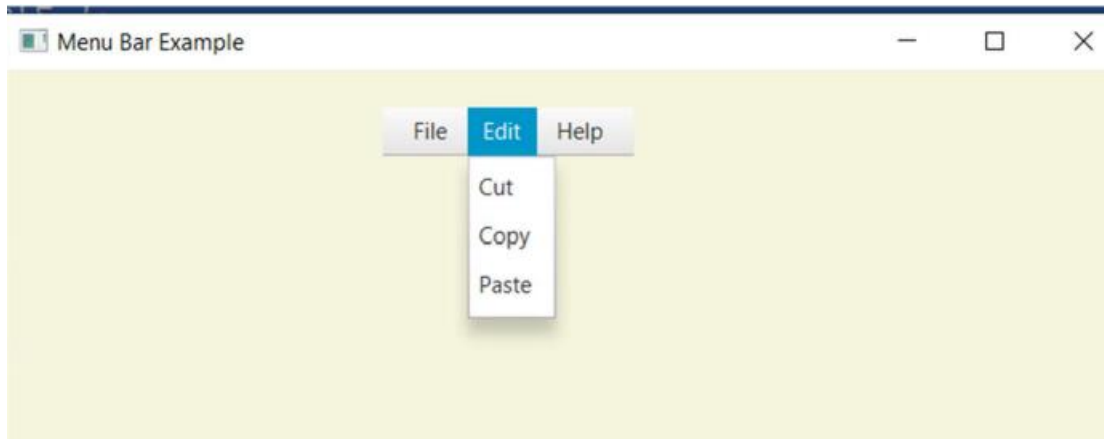

## 2. Java Program:

```
package application;
import javafx.application.Application;
import javafx.scene.Group;

import javafx.scene.Scene;
import javafx.scene.control.Menu;
import javafx.scene.control.MenuBar;
import javafx.scene.control.MenuItem;
import javafx.scene.paint.Color;
import javafx.stage.Stage;
public class Question2 extends Application {
    public void start(Stage stage) {
        //Creating file menu
        Menu file = new Menu("File");
        //Creating file menu items
        MenuItem item1 = new MenuItem("New");
        MenuItem item2 = new MenuItem("Open");
        MenuItem item3 = new MenuItem("Save");
        //Adding all the menu items to the file menu
        file.getItems().addAll(item1, item2, item3);
        //Creating edit menu
        Menu edit = new Menu("Edit");
        //Creating fileList menu items
        MenuItem item6 = new MenuItem("Cut");
        MenuItem item7 = new MenuItem("Copy");
        MenuItem item8 = new MenuItem("Paste");
        //Adding all the items to File List menu
        edit.getItems().addAll(item6, item7, item8);
        //Creating help menu
        Menu help = new Menu("Help");
        MenuItem item9 = new MenuItem("Help center");
        MenuItem item10 = new MenuItem("About Us");
        help.getItems().addAll(item9, item10);
        //Creating a menu bar
        MenuBar menuBar = new MenuBar();
```

```
menuBar.setTranslateX(200);  
menuBar.setTranslateY(20);  
//Adding all the menus to the menu bar  
  
menuBar.getMenus().addAll(file, edit, help);  
//Setting the stage  
Group root = new Group(menuBar);  
Scene scene = new Scene(root, 595, 200, Color.BEIGE);  
stage.setTitle("Menu Bar Example");  
stage.setScene(scene);  
stage.show();  
}  
public static void main(String args[]){  
    launch(args);  
}  
}
```

### 3. Screen Shots of Execution:

## 1. Problem Definition:

Q3. Write a Java program to build the GUI application using JavaFX for the following requirements: a) Create Context menu involving the menu items in the order: New & View. b) Create sub menus for the above main context menu: New → File, Folder & Image. View → Large, Medium & Small. The context menu must be displayed on right-click of the mouse button.

## 2. Java Program:

```
package application;
import java.io.FileNotFoundException;
import javafx.application.Application;
import javafx.geometry.Insets;
import javafx.scene.Group;
import javafx.scene.Scene;
import javafx.scene.control.Button;
import javafx.scene.control.ContextMenu;
import javafx.scene.control.MenuItem;
//import javafx.scene.control.TextField;
import javafx.scene.layout.HBox;
import javafx.scene.paint.Color;
import javafx.stage.Stage;
public class Question3 extends Application {
    public void start(Stage stage) throws FileNotFoundException {
        //Creating the image view
        Button button1 = new Button("new");
        Button button2 = new Button("view");
        //TextField textField = new TextField();
        //Creating a context menu
        ContextMenu contextMenu1 = new ContextMenu();
        //Creating the menu Items for the context menu
        MenuItem item1 = new MenuItem("file");
        MenuItem item2 = new MenuItem("folder");
        MenuItem item3 = new MenuItem("image");
        contextMenu1.getItems().addAll(item1, item2, item3);
        //Adding the context menu to the button and the text field
        ContextMenu contextMenu2 = new ContextMenu();
        //Creating the menu Items for the context menu
        MenuItem item11 = new MenuItem("large");

        MenuItem item21 = new MenuItem("medium");
        MenuItem item31 = new MenuItem("small");
        contextMenu2.getItems().addAll(item11, item21, item31);
```

```
// textField.setContextMenu(contextMenu);
button1.setContextMenu(contextMenu1);
button2.setContextMenu(contextMenu2);
HBox layout = new HBox(20);
layout.setPadding(new Insets(15, 15, 15, 100));
layout.getChildren().addAll( button1,button2);

//Setting the stage
Scene scene = new Scene(new Group(layout), 595, 150, Color.BEIGE);
stage.setTitle("CustomMenuItem");
stage.setScene(scene);
stage.show();
}
public static void main(String args[]){
    launch(args);
}
}
```

### 3. Screen Shots of Execution:

## 1. Problem Definition:

Q4. Write a JavaFX program that produces the following output when executed and displays Dialog Box (as shown in Figure.2) on click of Register button (as shown in Figure.1):

Figure 1 shows a JavaFX window titled "JavaFX Registration Form". Inside the window, there is a form titled "Employee Registration Form". The form contains the following elements:
 

- A text input field labeled "Enter Your Name:" with the placeholder text "Enter Your Name".
- Gender selection: "Select Your Gender:" with radio buttons for "Male" and "Female".
- A date picker labeled "Enter Date of Birth:" showing "07/10/2022".
- A dropdown menu labeled "Select Your State:" with "Karnataka" selected.
- Qualification selection: "Select Your Qualification:" with checkboxes for "UG", "PG", and "PhD", all of which are checked.
- A "Register" button at the bottom center.

Figure.1

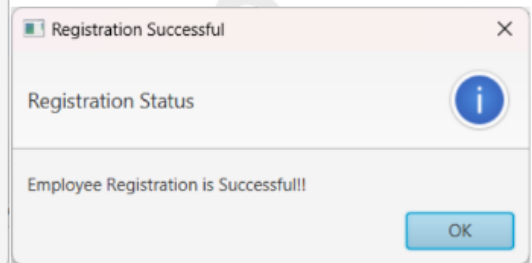

Figure. 2

## 2. Java Program:

**package** application;

```

import javafx.application.Application;
import javafx.geometry.Insets;
import javafx.geometry.Pos;
import javafx.scene.control.Dialog;
import javafx.scene.control.DialogPane;
import javafx.scene.Scene;
import javafx.scene.control.Button;
import javafx.scene.control.CheckBox;
import javafx.scene.control.ChoiceBox;
import javafx.scene.control.DatePicker;
import javafx.scene.layout.BorderPane;
//import javafx.scene.control.Button;
import javafx.scene.image.Image;
import javafx.scene.image.ImageView;
import javafx.scene.control.ButtonType;
import javafx.scene.control.Label;
//import javafx.scene.control.Label;
//import javafx.scene.control.ListView;
import javafx.scene.control.RadioButton;
import javafx.scene.layout.GridPane;
  
```

---

```
import javafx.scene.text.Text;
import javafx.scene.control.TextField;
import javafx.scene.control.ToggleGroup;
//import javafx.scene.control.ToggleButton;
import javafx.stage.Stage;

public class Question4 extends Application {
    @Override
    public void start(Stage stage) {
        //Label for name
        BorderPane root = new BorderPane();
        stage.setTitle(" JavaFX Registration form");
        // label headerLabel = new Label("Registration Form");
        Label label = new Label("Employee Registration Form");
        // Object root;
        root.setTop(label);
        //root.setAlignment(label, Pos.CENTER);

        Text nameLabel = new Text("Enter your Name");

        //Text field for name
        TextField nameText = new TextField();
